Jose Antonio Muñiz

+44 7521 434607 | j.a.munizmartinez@lse.ac.uk | London, UK

Biography

Jose Antonio Muñiz is a finance researcher specialising in financial economics, corporate policy, monetary policy, and sustainable finance. His doctoral research, partially funded by the Bank of Mexico, examined how disclosure, employee health and safety regulation, and ECB unconventional monetary policy shape firm value and bond market liquidity. Trained as an actuary with industry experience in insurance solvency regulation, portfolio management, and pension reform across Mexico, he brings quantitative rigour, event-study methodology, panel econometrics, GARCH modelling, to policy-relevant questions. He is currently a researcher at LSE's School of Public Policy and has published in the *Journal of International Money and Finance*. Native Spanish speaker with research experience across Latin America, Europe, and New Zealand.

Education

University of Bath — Ph.D. Finance 2025

Thesis: "Essays in Finance: Social Responsible Investment and its Policy Implications"
Supervisor: Prof. Shaen Corbet and Dr. Charles Larkin
Summary: My research examined three interconnected questions. First, I show that early voluntary sustainable disclosure reduces information asymmetry and is associated with improved firm financial performance, using panel data methods on USA listed firms. Second, I find that stronger employee health and safety policies increment firm value around policy announcements, identifying a channel through which non-financial regulation is priced by equity markets. Third, I analyse how the ECB's green asset purchase programmes create tensions between climate objectives, bond market liquidity, and financial stability - with implications for how central banks can pursue decarbonisation without distorting sovereign debt markets. Empirical methods include event-study analysis, panel fixed-effects regression, and GARCH-based volatility modelling.

IPADE Business School — MBA 2016

Thesis: "An Alternative Permanence Bonus to Mitigate Actuarial Liabilities"
Supervisor: Dr. Antonio Sancho y Maldonado

ITAM — B.Sc. Actuarial Science 2012

Current Job

School of Public Policy (LSE) — Researcher Jan 2026 – Present

With: *Prof. Vanessa Rubio-Márquez*

- Produce publication-ready policy and analytical articles for internationally recognised outlets, translating complex research on USA and LAC into accessible, high-impact commentary for influential public and policy audiences.
- Produced policy reports and briefs on Latin America, the Caribbean, the United States and Canada, delivering concise, decision-focused analysis for senior government stakeholders and external partners.
- Maintained an active academic publication pipeline by developing research papers for submission to top-tier journals, advancing original scholarship alongside a demanding policy and institutional remit.
- Applied quantitative policy analysis methods including econometric modelling, policy impact assessment, and causal inference techniques (R, Python, Stata) across different research projects.
- Led the planning and delivery of academic, policy and industry events with senior speakers including CEOs, high-ranking government officials and established scholars to raise profile, strengthen networks and drive engagement.

Research Experience

Department of Management (LSE) — Guest Teacher (*Recurring fixed-term*) Dec 2021 – Present

- Assist and guide *Executive Global Master's in Management* capstone projects across strategy, marketing, HR and finance.
- Advise students on research design, data collection and quantitative/qualitative methods tailored to applied business problems.
- Support working professionals in producing analytically robust, decision-relevant capstone projects.

Institute of Policy Research (University of Bath) — Researcher Oct 2024 – Dec 2025

With: *Dr. Charles Larkin*

- Wrote policy briefings in a variety of topics with focus on quantitative analysis of monetary policies, pension laws, among others to be used by stakeholders in the decision-making process of new implementations or changes of existing policies.
- Conducted advanced research applying panel econometric modelling, difference-in-differences analysis, and time-series methods (R, Python, Stata) to monetary policy, pension regulation, and AI/Fintech impact assessment.

European Cooperation in Science and Technology — Researcher Sept 2022 – Sept 2024

Advisor: *Prof. Joerg Osterrieder*

- Participant of EU regulation committees on Fintech and AI policies and directives in Europe where I presented to academics and industry quantitative analysis of policy implications of AI and Fintech regulation in Europe.
- Created a web-app for the COST Action-19130 by collecting time-series of different indexes, countries, and commodities. The app allowed members of the Action to do descriptive statistical analysis and empirical comparison of different data time series. My task fulfilled one of the main deliveries of the Action where I used R and Shiny from Posit (formerly R Studio).

Essex Business School (University of Essex) — Research Assistant April 2023 – Dec 2023

Advisor: *Prof. Silvia Gaia*

- Contributed to an FRC-commissioned study on the financial reporting consequences of the Wates Principles, bridging regulatory policy and empirical accounting research.
- Conducted NLP-based text analysis (Python, R) for the FRC Wates Principles Corporate Governance research project, measuring specificity and cross-firm similarity of governance disclosures in large private company reports.
- Developed a scalable similarity analysis pipeline applied to financial statements, producing evidence on variation in corporate governance code implementation across firms.

Teaching Experience

- Introduction to Mathematics for MSc — LSE 2025
- Global MSc Management — LSE 2025
- Introduction to Statistics for MSc Management — LSE 2025

- Stata Training: MSc Management— LSE 2025
- Stata Training: MSc Economics and Management — LSE 2025
- Introduction to Fintech (Adjunct to Prof. Shaen Corbet) — University of Waikato 2024
- Corporate Finance, Seminar Leader — University of Bath 2023
- Financial Mathematics II, Module Leader — ITAM 2020
- Theory of Interest, Module Leader — ITAM 2020
- Quantitative Tools for Business, Module Leader — IPADE Business School 2017–2018
- Decision Analysis, Guest Teacher— IPADE Business School 2017

Fellowships, Awards, And Honors

- Scholarship for Doctoral Studies issued by the Bank of Mexico (£20,000).
- Scholarship by the Secretary of Public Education and National Council of Science and Technology (£9,000).
- Short-Term Scientific Mission Grant issued by European Cooperation in Science and Technology (£2,000).

Skills

- Econometric methods: event-study analysis, panel fixed-effects, difference-in-differences, GARCH/volatility modelling, NLP and text analysis, time-series methods.
- Software skills: **R, Python, Stata, MATLAB, Qualtrics.**
- Languages: **Spanish** (native), **English** (proficient).

Conferences

- COST FinAI Conference — Reykjavik, Iceland 2024
- COST FinAI PhD School on Fintech and AI in Finance — University of Twente, Netherlands 2024
- SESTEF — Southampton Business School, UK 2023
- BAFA Financial Markets and Institutions SIG Conference — Nottingham Trent University, UK 2023
- International Congress of Actuary — USA 2014

Industry and Commercial Activities

Valuarte Consulting — Consulting Manager 2017 – 2020

- Led a team of five in the amendment of local pension laws, a project with government entities, reducing corporate liabilities resulting in new sustainable pension policies for future hires. Developed statistical and econometric models in R to assess workforce cohorts, long-term liabilities and institutional risk exposure. Produced analytical reports for HR and strategy functions, translating large administrative datasets into actionable policy and financial recommendations.

Citi Banamex — Portfolio Manager 2016 – 2017

- Analysed the bank's mortgage-linked securities exposure, with a focus on housing certificates and interest-rate sensitivity.
- Modelled derivative instruments, including CFDs, to evaluate price behaviour, scenario exposure and trading risk under different market conditions.
- Analysed interest-rate sensitivity under Banxico monetary policy scenarios, directly relevant to central bank policy transmission mechanisms by building predictive models in R.
- Supported portfolio decision-making through quantitative analysis of risk, market movements and mortgage performance.

Old Mutual — Senior Actuary 2012 – 2014

- Oversaw valuation, projection and performance analysis for a product portfolio exceeding USD 485 million in assets, identifying financial adjustments and risk-mitigation actions reporting to Head Office in South Africa.
- Led company-wide implementation of Solvency II (EU's risk-based capital regulatory framework) across the whole company, coordinating quantitative risk modelling, regulatory reporting, and internal control processes for the Mexican regulator (CNBV) and the Mexican Association of Insurance Institutions (AMIS).
- Presented Financial Impact Reports to the Risk Committee and supported regulatory due diligence with Mexican financial authorities.

Academic Service

- *Supply Chain Management* (2).
